

Experience you can rely on.

WHAT IS A MATERIAL SAFETY DATA SHEET (MSDS)

A Material Safety Data Sheet (MSDS) is a document that provides information on the properties of hazardous chemicals that may make up some of the products that you work with on a daily basis, and describes how they may affect Health and Safety in the Work Place.

They Should:

1. Identify any chemicals in the product
2. First Aid Advice
3. Safe handling and storage procedures
4. Emergency procedures
5. Disposal considerations

The library attached is for all trades and we will be happy to add to this if you find it incomplete or out of date.

When carrying out Work Place Risk Assessments we all must understand and take into consideration the products and content of products that we expose ourselves and others to.

The content within this section is a guide only and whilst all care is taken for completeness, the responsibility for providing the most up to date MSDS falls upon the Contractor.

You may find some sheets are titled SDS which stands for Safety Data Sheet, the purpose is the same.

HAVE A SAFE DAY!!
